

PREMIUM LUBRICANTS

Shark is here to quiet the noise! Our line of premium USA-made lubricants will solve any brake problem. Our #1 best-selling ceramic-based Ceramlub (pronounced Sir-Ram-Lube) lives up to the hype, as it will not break down or dry out over time, making sure that any moving part is protected. Pastelub, a synthetic moly lubricant made of aluminum and 40% ceramic solids, is perfect for non-moving parts, where rust prevention is ideal and can be used on rubber and plastic. Brake Soap is a biodegradable, non-toxic, non-petroleum-based cleaner that removes contaminants to create a clean surface before beginning any brake job.

NEW from Shark for 2026! Introducing Silicone lubricant. Perfect for electrical applications, this lubricant insulates and prevents voltage leakage and electrical corrosion in batteries, light bulbs and more. It repels water, displaces moisture and is stable during temperature fluctuations. It prevents the sticking of rubber spark plug boots and can rejuvenate and seal rubber caliper boots.

Ceramlub-2800

Why It's #1 for Brakes

- Extreme high pressure "proprietary (35% boundary solids) formula"
- Superior noise dampening and lubrication compared to silicone, Teflon or moly based lubricants
- Not affected by salt, water, dirt, weather, brake fluid or extreme heat
- Exclusive "high solids ceramic" content provides unequaled temperature range (-70°F to well over 2500°F)
- Safe for elastomers, rubber and plastic system components
- Durable... Lasts the entire life of the brake pads and shoes

Suggested Uses

Back of Brake Pads along with the Ears

Caliper Piston Face

Caliper Pins & Metal Clips

Stop Brake Noise!

Premium Lubricants by Shark™

Ceramlub-2800

- Extreme high pressure "proprietary (35% boundary solids ceramic) formula."
- Superior noise dampening and lubrication compared to silicone, Teflon or moly based lubricants.
- Good up to 2,500° F.

Pastelub-2400

- High pressure resistant, dry-film, boundary lubricant.
- Anti-seize protection against dirt and corrosion.
- No petroleum or silicone to weaken the carrier base.

Silicone

- Dielectric non-toxic, non-corrosive, high flash point lubricating grease used for insulation, lubrication, anti-fouling, and waterproofing.
- For Automotive, Marine, and Industrial applications.

Brake Soap

- Biodegradable, non-toxic formula was created specifically for washing metal parts such as brake rotors and drums.
- Scrubbing demagnetizes the rotors so metal particles can be washed away easily.
